

APR Antivibračná podložka rohová

Overview:

Field of application

For the structure-borne vibration control of boilers, air-conditioning and ventilation systems
Simply slip under item to be supported: no fixings on floor or equipment are necessary

Advantages

Dampens the transfer of structureborne noise to the building structure

Low overall height

Highly elastic rubber pad absorbs up to 95 % of its own and external vibrations

Oil-resistant, synthetic rubber

Resistant to temperatures from -50 °C to +120 °C

Aluminium base plate
